

## Harvey Arm Abduction Orthosis Arm Abduction Orthosis

**Vendor:**  
Fillauer LLC

### Features & Benefits:

- Orthosis shoulder joint can be assembled to the desired position of horizontal rotation
- Aligning the splines of the pivot pin and clamp plate allows the positioning of the shoulder to be set either at 15°, 45°, 75°, 105° (position A) or at 0°, 30°, 60°, 90° (position B)
- Removal of the clamp plate permits limited motion in the horizontal plane
- Auxiliary chafe and loops are provided in case it is necessary to fit a strap over the ipsilateral shoulder
- Bands and uprights can be adjusted for even pressure distribution
- Double slide buckles to adjust all straps for proper tension and length so that Velcro® closures anteriorly are in their mid-range of adjustment
- Universal side: reversible to fit both right or left arm
- Accessory Humeral Rotator Adaptor Kit permits practitioner to position the arm in humeral rotation with forearm in the vertical position, i.e. "Statue of Liberty" position

### Specifications:

- Two sizes (Small: patient less than 5' (152.2 cm) tall; and large: patient taller than 5')
- Color: beige
- Option of three linings available: Velfoam II (standard), Pe-Lite™ (waterproof, used when orthosis cannot be removed during bathing), or Sheepskin (extra comfort)

### Indications:

- Injuries to shoulder/arm
- Shoulder subluxation
- Rotator cuff rupture
- Postoperative conditions to the shoulder arm region that requires abduction positioning

### Call Points:

- Physician
- Orthotist
- Physiotherapist

### Warranty:

- Against manufacturer defects — single patient use only

24H7
