

## Polyethylene Low Density

**Professional Application:** Prosthetics, Orthotics

**Trade/Technical Description:** Low density polyethylene

**Specifications:** • Working temperature: about 150°C (302°F)

• Heating time: 3 minutes per mm thickness (use as guide only)

## Polypropylene Copolymer

**Professional Application:** Prosthetics, Orthotics, Pedorthics

**Trade/Technical Description:** Polypropylene / ethylene copolymer premier grade

**Specifications:** • Working temperature: about 185°C (365°F)

• Heating time: 3 minutes per mm thickness (use as guide only)

## Polypropylene Homopolymer

**Professional Application:** Prosthetics, Orthotics, Pedorthics

**Trade/Technical Description:** Polypropylene premier grade

**Specifications:** • Working temperature: about 180°C (356°F)

• Heating time: 3 minutes per mm thickness (use as guide only)
